

Vision Mate App

Technical Design Specifications

1. CONTEXT DIAGRAM

Defines the high-level scope of the Vision Mate application, showing its interactions with external entities such as the User, Caregiver, AI Services, and Navigation APIs.

2. USE CASE DIAGRAM

Illustrates the functional requirements and the interactions between the actor (User) and the system's core features like Object Detection and OCR.

3. DFD (DATA FLOW DIAGRAM)

Visualizes the flow of information through the system, showing how input data is processed and transformed into audio feedback.

4. ACTIVITY DIAGRAM

Models the workflow of the system, showing the step-by-step logic and decision paths during application execution.

5. SEQUENCE DIAGRAM

Focuses on the chronological order of messages exchanged between objects to fulfill a specific use case scenario.

6. CLASS DIAGRAM

Describes the static structure of the system by showing the application's classes, their attributes, operations, and relationships.

7. ERD (ENTITY RELATIONSHIP DIAGRAM)

Outlines the database architecture, defining the entities, their properties, and the relationships between them.
